Extremely small size enables space saving!!

Extremely small size and space saving

PM-24 series contributes to the miniaturization or space saving of your equipment.

Equipped with two independent outputs

All models are equipped with two independent outputs-Light-ON and Dark-ON. Hence, one model suffices even if the output is to be used differently, depending upon the location of use. Also, since two independent outputs have been provided, cumbersome handling of the output conversion control input, or fear of logic inversion due to a cable break, is eliminated. The sensor can be connected to the existing wiring as it is.

Example of connection with a commercial intermediate connector

Note: Ensure to insulate the unused output wire.

Wide model variety

A wide variety of 5 shapes and 15 models is available. You may select from this wide range to suit the mounting conditions.

Meets global requirements

Conforms to Europe's EMC Directive and obtains UL Recognition.

Both, NPN and PNP output models are available. The **PM-□24** has also obtained Korea's S-mark certification.

APPLICATIONS

Sensing the starting point on a rotating body

The starting point can be sensed by making a slit in the rotating body.

ORDER GUIDE

	U type 		PM-U24	NPN open-collector transistor	
			PM-U24P	PNP open-collector transistor	
			PM-U24-R	NPN open-collector transistor	

Note: The suffix "-R" indicates a flexible cable type.

3 m 9.843 ft cable length type

3 m 9.843 ft cable length type (standard: 1 m 3.281 ft) is also available. (excluding flexible cable type and PNP output type)

When ordering this type, suffix "-C3" to the model No.

(e.g.) 3m 9.843 ft cable length type of **PM-K24** is "**PM-K24-C3**".

Weight				Net weight: 10 g approx.	

Notes: 1) Where measurement conditions have not been specified precisely, the conditions used were an ambient temperature of +23 °C **+73.4 °F**.

2) The response frequency is the value when the disc, given in the figure below, is rotated.

3) In case the ultra-small type **PM-□24(-R)** is used at an ambient temperature of +50 °C **+122 °F**, or more, make sure to mount it on a metal body.

4) Take care that the flexibility of the **PM-□24-R** cable is lost if the ambient temperature in -10 °C **+14 °F** or less.

5) The cable of **PM-□24-R** is a flexible cable usable on a moving base. When the sensor is mounted on a moving base, fix the sensor cable joint so that stress is not applied to it. (Models other than the **PM-□24-R** cannot be used on a moving base.)

I/O CIRCUIT AND WIRING DIAGRAMS**PM-□24 PM-□24-R****NPN output type****I/O circuit diagram**

Notes: 1) Make sure to connect terminals correctly as the sensor does not incorporate a reverse polarity protection circuit. Further, the output is not incorporated with a short-circuit protection circuit. Do not connect it directly to a power supply or a capacitive load. Faulty wiring may result in damage.
2) Ensure to insulate the unused output wire.

PM-64**PM-24****PM-44/54**Convergent
Reflective**PM2****PRECAUTIONS FOR PROPER USE**

Refer to p.986~ for general precautions.

- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

Make sure to connect terminals correctly as the sensor does not incorporate a reverse polarity protection circuit. Further, the output is not incorporated with a short-circuit protection circuit. Do not connect it directly to a power supply or a capacitive load. Faulty wiring may result in damage.

Mounting

- When fixing the sensor with screws, use M2 screws and the tightening torque should be 0.15 N·m or less. Further, use small, round type plain washers. (ø4.3 mm ø0.169 in)

When using the optional mounting screw set **MS-M2**, a spring washer is included.

- In case **PM-□24(-R)** is used at an ambient temperature of +50 °C +122 °F, or more, make sure to mount it on a metal body.

Cable extension

- Cable extension is possible up to an overall length of 100 m 328.084 ft with a 0.3 mm², or more, cable. However, since a voltage drop shall occur due to the cable extension, ensure that the power supply voltage at the end of the cable attached to the sensor is within the rating.

But, when the overall cable length, including the cable attached to the sensor, is as given below, there is no need to confirm the voltage.

Conductor cross-section area of extension cable	Total cable length
0.08 to 0.1 mm ²	Up to 5 m 16.404 ft
0.2 mm ²	Up to 10 m 32.808 ft
0.3 mm ²	Up to 20 m 65.617 ft

Others

- Since the sensor is intended for use inside machines, no special countermeasures have been taken against extraneous light. Take care that extraneous light is not directly incident on the beam receiving section.
- Do not use during the initial transient time (50 ms) after the power supply is switched on.
- The cable of **PM-□24-R** is a flexible cable usable on a moving base. When the sensor is mounted on a moving base, fix the sensor cable joint so that stress is not applied to it. (Models other than the **PM-□24-R** cannot be used on a moving base.)
- Take care that the flexibility of the **PM-□24-R** cable is lost if the ambient temperature is -10 °C +14 °F or less.
