Introducing world smallest* amplifier built-in laser sensor

* Based on research conducted by SUNX as of April 2010

High precision detection is fulfilled in a world smallest size with directivity and visibility achievable only by laser. The laser adopted is Class 1 (JIS / IEC / FDA) laser that is safe to use, so that there is no need to separate the areas of sensor usage.

Reflective
type

NEW

Addition of reflective type!

Minute object detection type (Reflective type) EX-L221

A long range detection of 300 mm **11.811 in** is achieved by this ultra-compact sensor. A spot size of \varnothing 1 mm **\varnothing 0.039 in** can be easily used on various applications.

0.01 mm
0.0004 in

gold wire can also be detected!

Sensing range: 45 to 300 mm **1.772 to 11.811 in**

Spot size: \varnothing 1 mm **\varnothing 0.039 in**

(at a sensing distance of 300 mm **11.811 in**)*

* Visual reference value

High precision

Suitable for positioning and minute object detection

EX-L221

A repeatability of 0.02 mm **0.0008 in** or less at a range of from 100 mm to 200 mm **3.937 to 7.874 in** makes this type best suitable for positioning applications. Moreover, it boasts a top-class detection precision in the compact laser sensor category with its min. sensing object being \varnothing 0.01 mm **\varnothing 0.0004 in**. The same aspheric surface glass lens used in the thru-beam type is adopted to minimize aberration and deliver a high quality beam spot.

Easy alignment

Beam alignment is easy

EX-L211 EX-L212

Beam alignment is carried out by looking at the red spot reflected on the beam alignment screen to match with the actual object. The optimum position can be understood at a glance by looking at the beam alignment screen and stability indicator (green).

Thru-beam type

Long sensing range type (Thru-beam type) EX-L212

A long range detection of 3 m 9.843 ft is achieved. High precision detection with minimum beam spread is possible even in a long range.

Laser beam has little beam spread!

(at a sensing distance of 1 m 3.281 ft)*

* Visual reference value

Minute object detection type (Thru-beam type) EX-L211

The beam is purposely widened to have a lower beam density and little beam spread so that when detecting minute objects, even a slight change in the light received intensity will not be missed.

Min. sensing object ø0.3 mm ø0.012 in (typical)

EX-L211

The ø0.5 mm ø0.020 in light receiving slit cuts out any unnecessary beam. As only the beam which enters into the slit becomes valid, an accurate and precise detection is possible. This is effective for minute object detection or small difference in level detection.

Also, the aspheric surface adopts a glass module lens to deliver a high quality spot beam.

Ultra-compact

World smallest* size of reflective type, thru-beam type

* Based on research conducted by SUNX as of April 2010

The customized IC and the new structural design pursue a compact size. With its volume being approx. 67% decreased (thru-beam type) and approx. 58% decreased (reflective type) from general photoelectric sensors, an amplifier built-in laser sensor is now offered in a compact body that is in the range of conventional ultra-compact photoelectric sensors.

Easy setting

Same mounting pitch as ultra-compact photoelectric sensor

EX-L200 series has the same mounting pitch as ultra-compact photoelectric sensor EX-20 series so that the time taken in designing is saved.

Environmental resistance

Strong against water and dust with protection structure IP67

The sensor can be used even in environment where water or dust present because of its protection structure IP67.

High usability

M3 screw used for secure tightening

The mounting holes have metal sleeves inserted to prevent damage to the sensor due to over tightening of the screws. It is possible to tighten securely with M3 screws. (Tightening torque: 0.5 N·m)

Conductor thickness 1.5 times increased to make wiring easier

The lead wire conductor's thickness is increased to 0.15 mm² from 0.1 mm² of the conventional ultra-compact photoelectric sensor. This makes it easier to perform crimping work on the cables for better workability. In addition, the tensile strength of the crimping area has become stronger.

Sensitivity adjuster EX-L211 EX-L221

A sensitivity adjuster of world smallest size is incorporated to offer strong performance in minute detection or high precision detection.

Low current consumption

The laser light source contributes to low current consumption, as it is approx. 5 mA lower than a LED light source.

Switchable output operation

The output operation switching input enables the switching of Light-ON or Dark-ON in one unit. This prevents ordering mistake and reduces the maintenance of spare parts.

Laser is applicable for various usages.

Pigtailed type and 5 m 16.404 ft cable length type

Pigtailed type and 5 m 16.404 ft cable length type (standard: 2 m 6.562 ft) are also available.
 When ordering these types, suffix "-J" for the pigtailed type, "-C5" for the 5 m 16.404 ft cable length type to the model No.
 Please order the mating cable separately.
 (e.g.) Pigtailed type of EX-L211-P is "EX-L211-P-J"
 5 m 16.404 ft cable length type of EX-L211-P is "EX-L211-P-C5"

PRECAUTIONS FOR PROPER USE

- This catalog is a guide to select a suitable product. Be sure to read the instruction manual attached to the product prior to its use.

- Never use this product as a sensing device for personnel protection.
- In case of using sensing devices for personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

- This product is Class 1 laser in compliance with IEC / JIS and FDA regulations 21 CFR 1040.10 and 1040.11. Do not look at the laser beam through optical system such as a lens.

Mounting

- When mounting this sensor, use a mounting plate (**MS-EXL2-2**, **MS-EXL2-3**). Also, install the mounting plate in between the sensor and the mounting surface.
 - The tightening torque should be 0.5 N·m or less.
- Note: The mounting direction of the mounting plate is fixed. Install in a way so that the bending shape is facing the sensor side.
