

Precision Mechanic Set 25 Parts Item-No.: 22T019

Whether in the laboratory, in workshops, development offices or also for hobby, leisure and education: with this high-quality precision mechanic basic set you are always well equipped. The lockable box ensures order at all times and makes it easier to transport or store the precision mechanic's tool set.

The screwdriver handle is ergonomically shaped and slip-resistant, which makes working on delicate parts much easier. The shaft can be extended from 5 to 11 cm - maximum flexibility for the respective requirement. The bit holder is magnetic, this fixes ferromagnetic screws directly to the screw head. The knob on the handle can be rotated to facilitate screwdriving. All included bits are made of high-strength chrome vanadium steel (CRV) and are an absolute perfect fit for the respective screw. The included pointed tweezers are made of stainless steel and optimal for very fine work. Lever-on tools and a suction cup round off the practical scope.

Content:

1x Handle with extendable shaft • 17x Bits made of CRV in the versions/drives: Phillips PH000, PH00, PH0, PH1, PH2, Slotted SL1.5, SL2.0, SL2.5, Six-lobe, internal T2, T3, T5, Six-lobe, internal w.
