

# RAFIX 22 QR, emergency stop, reset by rotating, Mushroom head red, arrows red

### fields of application

- > Measurement-control-regulation
- > Electrical engineering
- > Mechanical and system engineering
- > Vehicle construction

### special features

- > Opaque mushroom
- > Options: Key, mechanical switch position indicator, illuminated window, unlocking by pulling
- > Robust also suitable for operation with
- > Additional protection against twisting due to threaded ring with claw
- > Firmly molded collar seal, cannot twist or be lost during installation.
- > 1-person mounting: the element is clamped by the seal in the mounting hole and can then be screwed from behind.
- > Degree of protection: IP 65 at the front (Except emergency stop with lock)
- > Mounting diameter 22.3 mm
- > Separate switching elements required
- > Close mounting of actuators possible (min. 30 x 60 mm), since wiring is required axially from behind
- > Switching elements with silver contacts (max. 400 V) or gold contacts (max. 35 V / 100 mA)

Connection types switching elements: cage clamp, screw connection or plug-in connection

# description

RAFIX control units are modular units consisting of several parts. In the RAFIX 22 QR family, they always consist of an actuating element, coupling and switching element. For assembly, the switching elements and lamp sockets are first snapped into the coupling. Then this unit is snapped onto the emergency stop. To release it, a bayonet lever must be actuated.

The emergency stop pushbuttons comply with IEC 60 947 and VDE 0113 Part 1. They are protected against unauthorized actuation by a positively guided mechanical movement sequence in accordance with DIN EN ISO 13850. To protect against accidental actuation, a pressure point must be overcome. The pushbutton engages in the pressed position. Due to the shape of the actuating element, the emergency stop pushbutton is protected against blocking. This means that an initiated emergency stop process cannot be interrupted by jamming objects.

Switching position indicator: When not actuated, a green ring is visible on the side.

Emergency stop actuators have the specified tactility and function only when assembled with the appropriate switching elements. Use lamp socket / LED element. A maximum of two switching elements (several contacts) may be used. The middle coupling position may only be used for lighting purposes.

### Additional information according to UL certificate:

> These devices should be mounted in an overall enclosure with sufficient stability and with the specified clearances.

### technical data

A Set private part of the second of the sec

2. Allgemeine Beschreibung und bestimmungsgemäße

2. Allgemeine Beschreibung und bestimmungsgemäße Verwendung Not-Halt-Befehlsgeräte zur Kortender und der Schaltigeräte zur Macht-Befehlsgeräte sind elektromechanische Schaltigeräte zur Maschinen, Fahrzeuge und Anlagen in einen sicheren Zustand zu bringen, um Gefahren und Schäden für Mensch und Maschine zu vermeiden oder zu verringern. Für die Inbetriebnahme, den Einsatz und technischen Überprüfungen gelten im speziellen folgende Vorschriften:

• Die Maschinenrichtlinie 2008/42/EG

• Die Sicherheitsvorschriften sowie

• Die Unfallevrehfüngsvorschriften/ Sicherheitsregeln Hersteller und Benutzer von Maschinen, an denen Not-Halt-Befehlsgeräte eingesetzt werden, tragen die Verantwortung für die Beachtung der Betriebsanfeitung, wie auch für die Einhaltung der in sie geltenden Sicherheitsvorschriften und regeln. Für den Tichbau und Betrieb von Not-Halt-Befehlsgeräten müssen zur bestimmungsgemäßen Verwendung folgende Anforderungen beachtet und eine Gefahrenbewertung durchgeführt werden:

• EN ISO 13889-1

3. Produktbeschreibung
Aufbau: Die Not-Halt-Befinsgeräte bestehen aus einer Kombination von Betätigern mit einem oder mehreren Schaltelementen. Die Not-Halt-Befehlsgeräte gibt es als Einbauversion oder in einem Gehäuse verbaut. Die Betätigung erfolgt durch Drücken, die Entriegelung erfolgt je nach Variante entweder durch:

• Drehbewegung nach rechts oder beide Richtungen (je nach Variante)

"Aktiv/lnaktiv"-Varianten:
• "Aktiv": beleuchtet, rot, Not-Halt Funktion gegeben
• "Inaktiv": unbeleuchtet, transparent, keine Not-Halt Funktion

Mode d'emploi auxiliaires de commande

d'ARRÊT D'URGENCE

### 2. Description générale et utilisation conforme

2. Description genérale et utilisation conforme Les auxiliaires de commande d'arêt d'urgence sont des appareils de commutation électromécaniques de protection des personnes. Ils servent à la mise l'arêt rapide pour mettre les machines, vé-hícules et installations dans un état sûr, afin d'éviter ou réduire dangers et dommages pour les genes et la machine. Les prescriptions suivantes s'appliquent tout particulièrement pour la mise en service, l'utilisation et les vérifications techniques : \*La directive machine 2006/42/CE.

La directive machine 2006/42/CE
Les prescriptions de sécurité et
Les prescriptions de sociatifé et
Les prescriptions de prévention des accidents / règles de sécurité
Le constructeur et l'utilisateur de machines sur lesquelles des auxiliaires de commande d'arrât d'urgence sont mis en œuvre assument la responsabilité du respect de la notice d'utilisation ainsi que des prescriptions et règles de sécurité qui s'appliquent aux. Pour le montage et l'exploitation d'auxiliaires de commande d'aertét d'urgence, les exigences suivantes doivent être respectéeu une évaluation des risques doit être menée pour une utilisation conforme:

- conforme : EN ISO 13849-1

# 3. Description du produit Structure: les auxiliaires de commande d'arrêt d'urgence sont une combinaison d'actionneurs avec un ou plusieurs éléments de commutation. Les auxiliaires de commande d'arrêt d'urgence existent en version encastrable ou montés dans un boltier. L'actionnement est réalisé par pression, le dévenouillage selon la variante par : • Mouvement de rotation vers la droite ou dans les deux sens (selon la variante) • Tirage dans le sens contraire de l'actionnement 3. Product description

3. Product description
Structure: The emergency stop control components consist of a combination of actuators with one or more switching elements. The emergency stop control components are available as a built-in version or installed in a housing. Actuation takes place by pressing, unlocking takes place depending on the type either by:

 Rotation to the right or both directions (depending on the variant)

Pulling against the actuating direction

Active/Inactive" types:

, "Active": illuminated, red, emergency stop function active
, "Inactive": non-illuminated, transparent, no emergency stop

Types with a key lock:

• Unlocking is performed by turning the key to the right after actualing the emergency stop control component. The key must be removed in every actuation state and should only be in the actuator during unlocking. This helps to avoid injuries to the hands.

'ariantes « actiffinactif » :
« Actif » : éclairé, rouge, fonction d'arrêt d'urgence présente
« Inactif » : non éclairé, transparent, aucune fonction d'arrêt d'urgence

Variantes avec serrure :

• Le déverrouillage est réalisé par rotation à droite de la clé après actionnement de l'auxiliaire de commande d'arrêt d'urgence. La clé doit pouvoir être retirée dans n'importe quel état d'actionnement et ne doit se trouver dans l'actionneur que pendant le déverrouillage. Ceci permet d'évier les blessures aux mains.

# Varianten mit Schloss: • Die Entriegelung erfolgt per Rechtsdrehung des Schlüssels nach Betätigung des Not-Halt-Befehlsgerätes. Der Schlüssel muss in jedem Betätigungszustand abgezogen werden und sollte sich nur während des Entriegelns im Betätiger befinden. Damit lassen sich Verletzungen der Hände vermeiden.
