Qomo QWB88-PS

Qomo Interactive Whiteboards are changing the way many educators engage students and present their material. Perfect for the classroom or anywhere there is a need for interactive instruction. Teachers are free to use the supplied felt Pens, extension Wand or even their fingers to annotate over any application on the computer screen. Using advanced Infrared (IR) technology, the Qomo interactive whiteboard recognizes the touch of your pen, or your finger, and can track them anywhere on the screen. The porcelain steel erasable surface of the Qomo board is durable and allows you to use the interactive whiteboard as a dry erase board. Thanks to this feature the surface produces virtually no glare and is very easy to keep clean. At the bottom of the screen this model houses a onboard pen tray to hold the 3 pens, extension wand and eraser. The versatile board is typically mounted to a wall or floor stand and easily integrates into a complete conference network. Qomo's flexible and easy to use Flow! Works annotation software is included with every Qomo whiteboard.

Features

- **Erasable porcelain surface**
- **Using advanced IR technology it recognizes the pen or finger and can track you anywhere on the screen**
- **Easily integrates into a complete conference network**
- **Surface is durable, cleans up easily and is coated to provide minimal glare**
- **Flow! Works annotation software included**
- **Annotate over any application and save your work**
