

POLYMEL polyester monobloc enclosures

1 The built-in canopy protects the door and the sealing gasket.

5 Enclosure with a tempered glass transparent door, maintaining the IP66 and IK08 (5J) degrees of protection.

9 Depth adjustable mounting plate supports with positions every 12.5 mm.

2 Wall fixing from the outside with stainless steel or polyester wall brackets.

3 The fixing strips, notched every 25 mm, located at the back of the enclosure allow direct attachment of mounting rails or other devices, thus reducing assembly time.

4 Four moulded bosses on the inside of the door help to assemble accessories. For maximum usable space, the door has a grid pattern for centring components. Door opening more than 180°.

6 The lock system is located outside the sealed area to maintain the IP66 degree of protection.

7 Interior hinges fixed into the door. The built-in polyurethane sealing gasket guarantees IP66.

8 Ventilation louvers provide natural ventilation of the interior of enclosure, thus preventing condensation.

10 Direct wall fixing with a plug to maintain the double insulation and watertightness. 4 inserts at the back for fixing the mounting plate.

11 Reversible polyester internal door with grid pattern for industrial control.

12 Self-ventilation windows at the rear of the enclosure.

PLM-75

PLM-75/CME

Hot-press moulded fibreglass-reinforced polyester enclosure, in grey RAL-7032.

Construction specifications

- Body of one single piece: monobloc.
- Fully reversible.
- Intended for use in both indoor and outdoor environments.
- A wide range of accessories enabling use in distribution, control and measurement panels for industrial and infrastructure facilities.
- Standard double bar lock or three-point lock with handle (without insert).

Technical specifications

- Conforms to general rules for empty enclosures established in IEC and EN 62208.
- IP66 conforming to IEC 60529 (EN 60529).
- High resistance to mechanical impacts IK10 (20 J) conforming to IEC and EN 62262.
- Self-extinguishing, conforming to IEC 60695-2-1 (960°).
- Extreme operating temperatures from -50 to +150 °C.
- Suitable for double insulation profiles conforming to IEC 60439-1 (EN 60439-1).
- Resistant to corrosion.

Dimensions (mm)

PLM-32...108

PLM-3025

Enclosure fastening ties

For the lateral or vertical coupling of two enclosures.

- Made of fibreglass-reinforced self-extinguishing polyester.
- Sealing gasket built in, which guarantees the IP66 degree of protection.
- Mounting with screws (included in the standard supply).

For attachment to enclosures	Type of coupling	Reference
PLM-75 y 86	lateral	BU/PLM
PLM-108	lateral	BU-108/PLM

Floor-mounting pillar

For the protection of cabling of outdoor installations, distribution panels for campgrounds, leisure harbours, etc. at which it is necessary to maintain a distance between the installation and the floor. Manufactured with fibreglass-reinforced polyester.

- Steel frame for fixing to the floor.
- Easy installation.
- High impact resistance.

For attachment to enclosures	Reference
PLM-54	SFS/PLM
PLM-64	

Cable entry plate

Plain polyester cable entry plates, with sealing gasket and fastening hardware.

For attachment to enclosures	Reference
PLM-75/86/108	TLA-4420
PLM-108	TLA-6420

Wall fixing

Wall fixing can be done directly by drilling the back of the enclosure or with the **PF/PLM** polyester brackets or **PFI/PLM** stainless steel brackets. The brackets are mounted from the exterior to the back of the enclosure, using inserts and M8 screws (included in the standard supply).

Model **PLM-32** is mounted using self-tapping screws.

The fixing pieces can be positioned vertically or horizontally.

The set is not included in the standard supply of the enclosure.

* For PLM-32 model and PFI/PLM

Post fixing set

Allows the enclosure to be fixed to concrete, wood or aluminium posts up to diameters of 675 mm.

- For exterior installations, provisional works or fairs, public lighting panels, etc.
- Galvanised steel fixing loop and profiles.
- Profiles attach to the back of the enclosure using M8 screws in the inserts (included in the standard supply).
- Recommended maximum weight of the installation: 100 kg.

For attachment to enclosures	Reference

Internal doors

Internal door set in fibre-glass reinforced polyester, except model **PI-3025/PLM**, made of sheet steel finished with polyester-epoxy RAL-7032 paint.

Insulating door specifications:

- Self-extinguishing.
- Grid pattern on the inside of the door for alignment of equipment.
- Quick locking through 1/4 turn sealable screws.
- Door opens in both directions.

* Plain internal door, dimensions A and B corresponding to the usable surface of the door.

Spare doors

Doors to be changed or repositioned on PLM enclosures.

- Made of fibreglass-reinforced self-extinguishing polyester in grey RAL-7032.
- For maximum usable surface, the plain door has a grid pattern for centring components.
- Door opening to > 180°.

Mounting plates

Metal

Microperforated

A complete range of mounting plates comprised of 4 versions able to provide all the mountings required for this installation system.

- Metal plates of galvanised sheet steel.
- Microperforated plates made of galvanised sheet steel with 3.6 mm Ø holes, 12.5 mm apart.
- Universal perforated plates for fast fixing of equipment, made of zinc steel.
- Insulating bakelite or polyester plates.

Tightening tools

To tighten and cut to size the adjustable ties. They facilitate wiring and save time, preventing the packets of cables from loosening.

Tool adjustable according to the thickness of the tie. Can be used with the following models: LZ25100 up to LZ46390. Ref.: **MARK3**.

A very light and ergonomic tool, the cut on the tie is done by twisting the tool. Can be used on the following models of ties: LZ25100 up to LZ46390. Ref.: **MARK20, 21**.

Reference	Admissible width ties

* Number and section in mm² of the conductors that may be housed inside each tube (orientative).

For more information, consult the electrotechnical rules for low voltage (MI BT 019).

Sigma safety terminals

Base of safety terminals made of black matte self-extinguishing polyamide-6; terminal of brass **MS-58**.

(DIN17660); ring of tempered steel zinc dichromate; cap made of orange self-extinguishing polypropylene.

- **Anti-cut.** The connection is made using a tightening mechanism that spreads the pressure out throughout the entire contact surface, avoiding the occasional rubs and stresses that damage the conductors.
- **Loosening proof.** The ring that surrounds the brass body ensures that the pressure exerted by the conductors cannot open the terminal and loosen the connection.
- **Total insulation.** All the SIGMA terminals are supplied with a terminal cap, avoiding any accidental contact with live parts.

All the calibres may be coupled one to the other, allowing the formation of strips of any length. Service voltage: 500 V.

Reference	Section m/m ²	A	B	C	D	E

S.95/100	1 × 100	58	54	33	40	20

NOTE: each terminal accepts up to 2 conductors of the section indicated.

Bypass terminal blocks

Earth and neutral bypass terminal blocks with insulated plinth.

Direct fixing by pressure on the profile supplied by the chassis itself.

Reference	Number of terminals × section in mm ²
RBLZ/21656*	2 × 16 mm ² + 5 × 6 mm ²
RBLZ/21686	2 × 16 mm ² + 8 × 6 mm ²
RBLZ/216146	2 × 16 mm ² + 14 × 6 mm ²
RBLZ/216296	2 × 16 mm ² + 29 × 6 mm ²

* Included in standard supply.

Bimetal BBH terminals

Terminals especially designed for branching cables on plates; their main application is busbar connection.

BBH terminals are made of a tinned, hot cast copper alloy and are suitable for connecting to a conductor of copper or aluminium indistinctly (bimetal).

Compact lamp

Compact fluorescent lamps, designed especially for use in electronic enclosures. May be fixed with a magnet.

- Connection voltage 220 V/50 Hz.
- Consumption 11 W.
- Connection/disconnection switch.
- 200 V/16 A socket with earthing.
- Maximum ambient temperature 60 °C.
- Lighting output = 75 W bulb.

Specifications	Reference	Plug	Tension
Lamp fixed with a magnet or on 35 mm symmetric DIN rail.	LAM-75	220 V/16 A	220 V/50 Hz
Lamp fixed on a 35 mm symmetric DIN rail.	LAC-75	220 V/16 A	220 V/50 Hz

Lamp fixed on a 35 mm symmetric DIN rail.	LAC-75/120	120 V/15 A	120 V/60 Hz

Slimline lamp

Magnetic-fixing flat lamps equipped with energy efficient light bulbs, with or without a plug.

- Electronic ballast.
- Power: 11 W.
- Luminosity: 900 lm.
- Lifespan: 10000 h.
- Plastic casing UL94 V0.
- IP20.
- Class I.

Incandescent lamp

Incandescent lamp designed especially for use in electronic enclosures.

- Connection voltage 220 V/50-60 Hz.
- Consumption 60 W.
- Connection/disconnection switch.
- Terminal connection entry.

Reference
LAI/OL 68

Dual lamp

Light fixtures designed especially for use in electronic enclosures with various possibilities for fixing and operating.

- Energy efficient electronic lamp E27, 20 W, 220-240 V/50-60 Hz or 120 V/60 Hz.
- Lighting output = 100 W bulb.
- Fixed models connection via 2.5 mm² terminal strip and the mobile model via cable.
- Degree of protection IP20.
- Insulation class II.
- Conforming to EN 55014 and EN 50082-1.

Specifications	Support fixing	Figure	Reference	Tension
Motion-activated	Magnetic, using screws and/or (1) 35 DIN rail	1	LAMDP LAMDP 120	220 V/56 Hz 120 V/60 Hz

Support for LAMDP , LAMIN , LAMPO lamp	Adhesive or screws	4	SOLAM	

(1) DIN rail not provided.

Ventilation devices

To connect the inside of the enclosure with the exterior atmosphere and prevent condensation. Can be fixed onto the outside, Ref.: **VM-25** and **VM-27** or onto the internal sides connected with the rear self-ventilating windows of the POLYMEL enclosures, Ref.: **VM-35**.

Reference	Specifications
VM-25	For coupling to the outside of all polyester enclosures
VM-27	
VM-35	For coupling to the interior of POLYMEL enclosures

Purging device

To remove condensation water.

Mounted on the Ø 9 mm housing on the inside of the bottom of the enclosure. Degree of protection IP55.

Reference	Specifications
VEA-9	For attachment to all enclosures

Rear blanking plates

Rear blanking plates in insulating material to protect against unwanted elements entering into the self-ventilating window of the enclosure.

Not included in standard supply with the enclosure except for model 108 which has it built in.

For attachment to enclosures	Reference
PLM-32	CE-PLM/A
PLM-43 and 54	CE-PLM/B
PLM-64, 75 and 86	CE-PLM/C

Expandable nuts

Dodge-type brass nuts designed to be incorporated into the bosses of **PLM** enclosures.

Specifications	For attachment to enclosures	Reference
M5	PLM-43 and 54	TEX 5
M6	PLM-64 and 108	TEX 6
M8	For the back of the enclosure	TEX 8

Document pocket

PP-A models made of thermo-plastic in grey RAL-7035.

- Fixed with adhesive tape or screws.

For holding A4 or A5-sized plans.

Insulated	
Plan size	Reference
A4	PP-A4
A5	PP-A5

Dinimel DLA distribution chassis

**PLM-64/KT + DLA-48P**

Distribution chassis set for modular equipment, Ref.: DLA-... with a distance between the 35 mm symmetric profile and the cover, which is adjustable as needed by the customer from 40 to 85 mm.

- Rigid structure made of galvanised steel.
- Insulating cover and frame in self-extinguishing material in RAL-7035. Quick mounting, without the need for screws.
- System for identifying circuits included in the standard supply.
- Earth and neutral bypass terminal blocks. Ref.: **RBLZ/21656** (included in standard supply).

Dimensions (mm)

* Models DLA-48P, 66, 88, 84 and 112.

RBLZ/216296	2×16 mm ² + 29×6 mm ²

* Included in standard supply.

Distribution bars

For the distribution in a single row of automatic switches with a total of 12 modules.

No. of bars	No. of poles per bar	Reference	Figure No.
1	12	BDS 1/12	1
2	6	BDS 2/6	2
3	4	BDS 3/4	3
4	3	BDS 4/3	4

POLYMEL enclosures in exterior industrial installations

Due to the quality of the plastic materials and their constructive characteristics, POLYMEL enclosures are suitable for panels in installations subjected to contact with chemical agents and harsh environments, usually, for example, in the petrochemical, cement making, etc. industries.

POLYMEL enclosures in interior industrial installations

Their high degree of protection (IP66) and their high resistance to impacts and temperature make POLYMEL enclosures particularly ideal for industrial installations subjected to processes with frequent water projection, such as the paper-making and agri-food industries or automobile washes.

POLYMEL enclosures in leisure facilities

Their resistance to corrosion and UV rays permits POLYMEL enclosures to be adapted to panels in exterior installations subjected to long exposures to the sun: winter sport stations, installations close to the sea, etc.
