## LED and Diode Mounts

### MEC

Mounting blocks for wire-ended LED's and axial lead components, e.g. diodes, capacitors etc.

The LED mounting block can accept 3 or 5mm diameter LED's and allows them to be mounted raised from, or at right angles to the PCB. Leads are kept separated to avoid short circuits and the LED body fits into a circular recess.

The diode cradle can be used for diodes or other axial leaded components which have to be mounted vertically, due to space considerations or PCB modifications. With components fitted in this fashion, the risk of damage to PCB tracks caused by pressure on the component, is greatly reduced.
