

ENVIROTXT!

Main Functions

- Instant power loss/restore text message (SMS) alerts to all users (e.g. power cuts)
- Instant temperature SMS alerts (Alert! 5 Degrees!)
- Rapid temperature rise SMS alert (e.g. if the temperature rises by more than 5 degrees in 3 minutes an alert is sent)
- All temperature alert parameters are customisable
- No installation, plug & play
- One master user & 4 additional users
- Internal & external temperature sensor included
- Simple quick set up (<5 mins)

Technical Data

- Size 11cm x 6cm x 5.5cm (at the widest parts)
- 1m External Temperature Sensor inc.
- UK & EU Versions available
- SIM Card Required
- Input 110v-230v
- CE Compliant
- Automatic time and date synchronisation
- Operating temperature -10°C to +50°C
- Relative Humidity 10-90%, without condensation
- GSM Band 850/900/1800/1900Mhz

Order code
43-0056

Envirotxt® Overview

Envirotxt is a new innovative GSM (mobile network) device that monitors temperature and power loss. It has a built in temperature sensor which sends SMS alerts at pre-programmed user defined thresholds from -10 degrees to +50 degrees. Envirotxt needs a SIM card to send SMS (text message) alerts through the mobile network, it needs a standard sized SIM card on any network (except the Three Network as this is purely digital network). Envirotxt has a quad band GSM module so it can be used in almost all countries around the world (versions available: UK & EU).

Envirotxt is an easy, simple and low cost device that provides power loss and temperature alerts. It is used for a wide variety of applications including, second homes (e.g. fridge/freezers and frozen pipes), boats (e.g. shore power loss and preventing the engine from freezing), medical (e.g. critical fridge/freezers or keeping medicine at required temps etc), warehousing (e.g. storage at correct temperatures & power loss), hydroponics, various utilities, server/comms room and many more.

Envirotxt has one master user who has full control of all its functions and up to 4 additional users can be added.

All temperature ranges can be customised by the user to alert at your required temperatures e.g. you can set the temperature parameters at 3 – 20 degrees and if the temperature drops below 3 degrees Envirotxt will send an SMS alert and if the temperature rises above 20 degrees it will also send an SMS alert, it will also alert when the temperatures goes back inside the pre-set range. Envirotxt is simple and easy to use, simply plug in and send a couple of SMS's then you are in control and can set any temperature required for instant SMS alerts. Envirotxt has an internal temperature sensor and also an external temperature sensor so temperature can be monitored in a more specific location if required.
