- Attachment tool with holding function for screws
- Holds all screw profiles and sizes securely on the tool
- Suitable for round and hexagonal blades with a diameter of 4.5 mm to 6.0 mm

Screw gripper: attachment tool with holding function for screws. Holds all screw profiles securely on the tool. During the job, the gripper can be pushed up along the blade so that it is not in the way when working with low-lying screws.

Accessories

And this is how the gripper works

Push the screw gripper onto the tip of the screwdriver until the end of the blade protrudes from the rubber blade holder.

And this is how the gripper works

Attach the screw to the tip of the blade and secure it in the gripper.

And this is how the gripper works

Pull the screw gripper towards the screwdriver handle until the two arms of the gripper sit against the head of the screw and are spread slightly apart. The Wera screw gripper releases the screw automatically after it has been fastened.

And this is how the gripper works

The two gripper arms spread further apart as they are pushed against the surface and automatically snap back when the head of the screw is countersunk.

And this is how the gripper works

When fastening screws in blind holes the screw gripper is pushed back, making it possible to reach even deep-seated screws.

And this is how the gripper works

The screw gripper attachment can also be used with L-keys and long bits!
