

## Product Name - 100PK Chromatography Filter Papers, 8 Inch - No. 1

- 100 sheets of no. 1 chromatography filter papers
- Each sheet measures 8" x 8" and is very thin
- Used in chromatography to separate a sample into its component parts - Used to test for the presence of various materials, to monitor the rate and progress of a reaction or to determine the purity of a product.
- Can be used for various experiments in the laboratory and at home Paper allows students to separate most water-soluble inks into their original blended pigments to reveal their hidden coloration.
- Absorbs liquids and provides more surface area for evaporation meaning more and faster evaporation which, in turn, means more vapor which is often desired

## Manufacturers Code - CH0395B
