At the workplace

The Bit-Checks can be positioned upright at the workplace so the tool is always quickly to hand.

Universal holder with quickrelease chuck

For a firm, wobble-free connection between holder and bit with quickrelease action. Simply push sleeve forward to change bits. The nonmagnetic version prevents any unwanted attraction of metal filings.

We have had bit ranges in our programme for many years now. In 2016, we put a question mark against everything and came up with a game changer. We wanted bit ranges with bits whose profiles and sizes could be more easily recognised. We wanted bit ranges that were as compact as possible and which were Wera-like at a first glance. We wanted bit ranges with bits that could be removed and reinserted more easily. We wanted bit ranges with as little weight as possible. The new multicomponent Bit-Checks satisfy these requirements; the soft material in the lower section of the Bit-Checks ensures that the bits are firmly held yet easy to remove.
