Handling of silicone lens LEDs

Notes for handling of silicone lens LEDs

- Do not use a force of over 3kgf impact or pressure on the silicone lens, otherwise it will cause a catastrophic failure
- The LEDs should only be picked up by making contact with the sides of the LED body
- Avoid touching the silicone lens especially with sharp tools such as tweezers
- Store the LEDs away from dusty areas or seal the product against dust
- When populating boards in SMT product, there are basically no restrictions regarding the form of the pick and place nozzle, expect that mechanical pressure on the silicon lens must be prevented
- Do not mould over the silicone lens with another resin . . . epoxy, urethane, etc.
