

## Product Change Notice

### ESR70 Gold (Model ESR70)

Effective date: 1<sup>st</sup> May 2026 onwards

The ESR70 Gold used to be supplied with gold plated crocodile (alligator) clips as standard, fitted by means of gold plated 2mm connectors to the test leads.

**From the 1<sup>st</sup> May 2026, the standard probe types supplied as standard will be gold plated universal hook probes, fitted by means of the same gold plated 2mm connectors.**

This is a big improvement in quality and useability and is implemented at no extra cost. The user can still connect other probes types as before.

To assist you with the changeover (and to enable you to synchronise the change of published photography and specifications), we will label the outside of the individual instrument box with the type of probes fitted from the 1<sup>st</sup> May 2026 for a duration of 2 months.

#### Old Probes:

#### New Probes from 1<sup>st</sup> May 2026:
