- Handle/Interchangeable blade system for rapid exchange of the blade
- Stubby ESD bit hand holder: short compact shape for working in confined spaces
- ESD bits hand holder for electrostatically safe working, magnetic
- Ergonomic 2-component Kraftform handle for precise work
- 851/1 J: bits optimized for Asian PH screws

Handle/interchangeable blade system for lightning fast replacement of the required blade. Especially small ESD bit-holding Stubby screwdriver handle with short blade for electrostatically secure working even in hard to reach areas. Suitable for the mounting of bits with 1/4" hexagon drive as per DIN ISO 1173-C 6.3 and Wera connection series 1. With strong permanent magnet, which also holds large and heavy screws. The 2-component Kraftform handle with its practical combination of hard and soft zones allows for a firm grip and precise working. High-quality bits for universal use. Compact, textile box with high robustness, low weight and volume. Suitable for docking with the Wera 2go system.

Wera ESD Tools

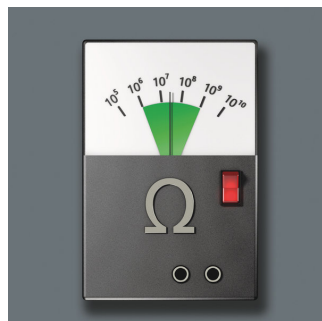

High protection

Non-roll feature

Tangible ergonomics

The requirements for ESD-safe screwdrivers are specified in the European standard DIN EN 61340-5-1. This standard also includes a handle that has to be out of a defined conductive material. The Wera products in the ESD series satisfy these standards and the even more stringent requirements demanded by some technology companies.

The electric surface resistance of the Wera ESD material is $\leq 10^9$ ohm. This securely protects components against electrostatic energy and associated damage.

The hexagonal non-roll feature prevents any rolling away at the workplace.

The 2-component Kraftform handle allows high power transmission due to the non-slip, softer grip areas and high working speeds due to the hard grip areas, which allow a quick hand switch.

Compact shape

With its compact handle shape and the short blade, the Kraftform Stubbies are particularly suitable for working in confined screwdriving situations.

Tough-absorbing bits

Tough-absorbing Wera bits (Z) prevent any premature breakage of the drive tip.
